## Status saver whatsapp status video download app

WhatsApp is one of the most popular messaging apps around and no matter what device you have, chances are you will be able to download it. In fact, you may well be able to download it to multiple devices, allowing you to get your messages anywhere. Doing so is a simple process, but it varies based on whether you're using an iPhone, Android, Windows or a Mac, which is where this guide comes in. Below you will find step-by-step instructions to download WhatsApp on all of the above devices, as well as a guide to using WhatsApp Web. How to send GIFs in WhatsApp on Android and iOSHow do I download WhatsApp on iPhone? To download WhatsApp on an iPhone, simply open the App Store, type WhatsApp in the search and it should appear. The full title of the app is WhatsApp Messenger and it's made by WhatsApp Inc, so make sure it's the one you download. Once you have found it, hit Get as you would download any other app, and the download will begin. Alternatively, if you go to whatsapp.com/dl in a browser on your phone it takes you directly to the App Store listing. Once downloaded, start it and follow the simple installation instructions, which include accepting the terms and verifying your phone number (which simply means entering it and waiting for a text message). If you have previously used WhatsApp and have a back-up of your data, you will also be asked if you want to restore this. Then you're ready to start messaging. Note that you need iOS 8 or later for WhatsApp to work. Download WhatsApp on your iPhoneHow do I download WhatsApp on Android? The process on Android is very similar on iOS and as with iOS there are two ways to download WhatsApp. One is to open Google Play, type WhatsApp in the search bar and look for WhatsApp Messenger by WhatsApp Inc. Tap it, tap install and wait for it to appear on your phone. The other way to do that is to go whatsapp.com/dl on your phone's browser. This will redirect you directly to the Google Play list, where you can just tap install. Once installed, launch it, accept the terms, enter your phone number so the app can verify it and follow all other steps, which may include restoring from a back-up if you've used WhatsApp before. Note that you need an Android version above 2.3.7 to create a new WhatsApp account (i.e. if you have never used WhatsApp before), and Android 2.3.3 or later to download WhatsApp. You also need to use a phone, rather than a tablet. Download WhatsApp on your Android phoneHow do I download WhatsApp on Windows? To get WhatsApp for Windows, go whatsapp.com/download and press the download button for Windows. Once it has been downloaded, open the WhatsApp.exe file to install it, then follow the instructions, which involves launching WhatsApp on your phone and scanning a QR code (with the scanner available Menu &gt; WhatsApp web in the WhatsApp phone app). This will then link your phone's WhatsApp up to your computer. Please note that this is therefore WhatsApp that is also installed on the phone and for the two to stay in touch. For example, if you turn off your phone, then the windows version may not work until you turn it back on. You also need Windows 8.1 or higher to use WhatsApp.How do I download WhatsApp on Mac? There are two ways to download WhatsApp on a Mac. One is to go to whatsapp.com/download and click download for Mac OS X 10.9 and higher button. When you're collected from it, you'll need to use Mac OS X 10.9 or higher. This will load .zip file, which you should then open to run WhatsApp.app. This will install WhatsApp, during which time you will be asked if you want to add it to your Applications folder and your desktop dock. So make a decision, then when the installation is complete launching WhatsApp.Alternatively you can go to WhatsApp Desktop listing on the Mac App Store and download it from there. Either way, once it's installed you then have to scan a QR code using the phone app (which also needs to be installed). On iOS 8.1 or higher you will find this QR scanner in Settings &gt; WhatsApp web. The WhatsApp service on Mac only works while WhatsApp is running on your phone, so if you turn off your phone or delete the phone app, it will stop. How do I use WhatsApp Web? You don't actually need to download WhatsApp to use it on your PC or Mac. Instead, you can go to web.whatsapp.com and run it from a web browser. When you arrive on that page, you need to scan a QR code by launching WhatsApp on your phone and heading to Menu or Settings, then WhatsApp Web, to access the code reader. Once you've scanned the code, WhatsApp Web will launch, complete with all your WhatsApp conversations, allowing you to chat from your browser. How to remove WhatsApp messagesHow to use WhatsApp in China with a VPN If you've been looking for a smart alternative to your phone's domestic texting and calling apps, WhatsApp is a great choice. With several sleek features and a simple interface, this free, multifunction app has become one of the most popular messaging platforms in the world. Quick chats, groups, voice - video calls?—An all-in-one messaging app! Because of its focus on simplicity, WhatsApp witnessed a phenomenal increase in growth. In recent years, the app has introduced several features, including video and voice calls. At the same time, it has retained the light footprint. The conversation window simply focuses on chat, allowing you to send files, emoticons, location, and contacts easily. Compatibility with low-powered smartphones as well as Android Go devices has enabled the platform to attract millions of people from all parts of the country. At first glance, WhatsApp serves the same purpose as its competitors such as Viber, Skype and Telegram. But what makes the app unique is that there is an abundance of advanced features, such as the search feature for simple in conversations, the ability of star messages to control later, seamless integration of group chats, group chats, of course, easy-to-use interface. In addition, WhatsApp mixes multimedia messages to make conversations more interesting and fun. Interactive stickers add the long list of emojis already in the app. While Viber had the advantage of stickers until a few months ago, it doesn't anymore. WhatsApp just increased its game! Seamless cross-platform calling and chattingWhen compared to the popular iMessage, Whatsapp has a great advantage. Being platform agnostic, it can be used on any device or operating system. Unlike most messaging apps, you can go beyond simple conversations. WhatsApp has integrated maps, which allow you to share space with friends and family. You can also share files and contacts directly in the conversation window. These are loads of customization options. You can set up custom notifications notification, wallpapers, and even send your status. You can also use the camera to shoot videos and photos from within the app. Like iMessage and Viber, WhatsApp's simple interface shows chats in text bubbles with a timestamp. It also notifies you when a recipient has viewed the text. Because the app can automatically identify people in your contact list, you don't need to add one manually. You can even create groups of friends and family members to communicate with up to 256 people in a single window. WhatsApp lets you share Instagram-like stories, which remain visible for 24 hours. It's an interactive way to publish live feed from anywhere, anytime. Search makes browsing through conversations much easier. You can search by contact name, keyword, phone number, or group. In fact, you can also search for keywords in a particular conversation window. WhatsApp allows you to backup conversations and data to a Google account or phone memory, so you have easy access to old messages. Secured data privacy messagesIf you're looking for a messaging app with end-to-end encryption, Telegram can be a good choice. More recently, Facebook's bad reputation has lowered confidence in WhatsApp. That said, WhatsApp still comes with several features that have huge significance. In fact, the security features on the app have encouraged Facebook to turn WhatsApp into a full-featured payment system, allowing you to send or receive money in the app. There's something you won't find in any other messaging app. Using end-to-end encryption, WhatsApp secures all messages that pass through the platform. While your app doesn't store personal information, you can add an additional layer of security to your privacy settings. It's easy to set up two-factor authentication, which allows you to enter a second passcode for better protection. Soon, WhatsApp will also be integrated with your device's fingerprint sensor to make sure you're the only one authorized to access. At present, another messaging app on the market with the fingerprint sensor for additional security. Take the experience beyond mobileUnlike Viber and Telegram, WhatsApp has a desktop desktop called WhatsApp Web. It works with standard Windows or Mac browsers, but comes with limited features. The good news is that everything you do on the desktop version will be synchronized with the app on your smartphone. Although the web version doesn't allow voice or video calls, it's still a great way to stay connected while working on your laptop. Where can you run this program? With over 800 million users worldwide, WhatsApp is available on Android, iOS, Windows Phone, and BlackBerry.Is it a better option? While some people don't like being part of the Facebook ecosystem, others trust platforms like Viber and Telegram more. If you think it would be helpful to check some options before the final choice, here are some brief info on them. Viber:As WhatsApp, Viber uses contact numbers to identify registered users. With Viber, you can make free calls, send messages, videos, and pictures. While WhatsApp has started to provide the ability to use stickers, Viber has been doing so for some time. You can choose from a wide range of fun stickers for chats. Skype:While Skype has always been popular for video calls, the updated design allows you to send files, pictures and messages as well. Unlike WhatsApp, all its features are available on both mobile and desktop versions. One drawback of using Skype instead of WhatsApp is the fact that spammers can send messages, and you can only block them once they do. Telegram:Based on Cloud technology, Telegram lets you send messages faster than WhatsApp. It's a huge advantage for people who want to send large files. Because it's open source, you can send media and text messages in a conversation with up to 200,000 users. With end-to-end encryption, you can be sure that your conversations are safe. Without a doubt, WhatsApp Messenger is a remarkable messaging app. A complete replacement for the domestic SMS app on your smartphone, WhatsApp is ideal for chatting with friends and family without any restrictions. Are you going to download it? Yes, definitely! WhatsApp combines end-to-end encryption, ease of use, cross-platform functionality, internet-based international calling and broad global reach to give you a power-packed messaging platform. Platform.
